BEAUCE GOLD FIELDS CLOSES \$500,000 FLOW-THROUGH PRIVATE PLACEMENT

Beauce Gold Fields (Champs D’Or en Beauce) (TSX Venture: “BGF”), (“BGF”), is pleased to announce that it has closed a fully subscribed non-brokered private placement of 3,125,000 Flow-Through units ("Unit") at \$0.16 per unit for gross proceeds of \$500,000.

Each unit will be comprised of one (1) Flow-through common share and of one (1/2) common share purchase warrant (“Warrant”) of the company. Each full warrant will entitle the holder thereof to purchase one common share of the capital stock of the company at a price of \$0.21 for a period of 24 months from the date of closing of the placement. Each share issued pursuant to the placement will have a mandatory four-month-and-one-day hold period from the date of closing of the placement. The placement is subject to standard regulatory approvals.

In connection with the placement, the company will pay a cash finder's fee of \$12,250.00 to Leede Jones Gable Inc. of Toronto, Ontario. The company will also issue 153,125 warrants to Leede Jones Gable Inc. that will have the same rights and the mandatory four (4) month and one (1) day holding period as the placement warrants, so that each warrant gives Leede Jones Gable Inc. the right to purchase one common share of the company at \$0.21 for 24 months following the closing of the placement.

Proceeds will be used for exploration work on the Company’s gold projects.

About Beauce Gold Fields

Beauce Gold Fields is a gold exploration company focused on placer to hard rock exploration in the Beauce region of Southern Quebec. The Company's flagship property is the St-Simon-les-Mines Gold project site of Canada's first gold rush that pre-dates the Yukon Klondike. The Beauce region hosted some of the largest historical placer gold mines in Eastern North America that were active from 1860s to the 1960s. It produced the largest gold nuggets in Canadian mining history (50oz to 71oz).

Comprising 152 contiguous claims and 7 real estate lots, the project area contains a six kilometer long placer channel consisting of an unconsolidated gold-bearing auriferous units of a lower saprolite and an upper brown diamictite. The Company has calculated a Gold Exploration Target for the entire historical placer channel ranges between **61,000 ounces** (2,200,000 m³ @ 0.87g Au/m³) and **366,000 ounces*** (2,200,000 m³ @ 5.22 g Au/m³).

*Source: Beauce July 4th 2018[43-101 Report.

The Company has identified a major Fault Line that coincides with an interpreted fault structure across the property. Evidence suggests the erosion of the Fault Line as a probable source of the historical placer gold channel.
